We believe these actions are beginning to have a positive effect. A survey as of May 2005 conducted by The NPD Group, a market research firm, shows that about one-third of Americans aged 13 or older who had ever downloaded music from a file-sharing service stopped using such file-sharing services over the past year, and an additional 27% reduced their downloading activity.

Music Publishing

Background

Music publishing involves the acquisition of rights to, and licensing of, musical compositions (as opposed to recordings) from songwriters, composers or other rightsholders. Music publishing revenues are derived from four main royalty sources: Mechanical, Performance, Synchronization and Other.

In the U.S., mechanical royalties are collected directly by music publishers from recorded music companies or via The Harry Fox Agency, a non-exclusive licensing agent affiliated with NMPA, while outside the U.S., performing rights organizations and collection societies perform this function. Once mechanical royalties reach the publisher (either directly from record companies or from collection societies), percentages of those royalties are paid to any co-owners of the copyright in the composition and to the writer(s) and composer(s) of the composition. Mechanical royalties are paid at a penny rate of 8.5 cents per song per unit in the U.S. (although recording agreements sometimes contain “controlled composition” provisions pursuant to which artist/songwriters license their rights to their record companies at as little as 75% of this rate) and as a percentage of wholesale price in most other territories. In the U.S., these rates are set pursuant to industry negotiations contemplated by the U.S. Copyright Act and are currently increased at two-year intervals. For example, on January 1, 2004, this rate went from 8 cents per song to 8.5 cents per song. On January 1, 2006, this rate will increase again to 9.1 cents per song. Recordings in excess of 5 minutes attract a higher rate. In international markets, these rates are determined by multi-year collective bargaining agreements.

Throughout the world, performance royalties are typically collected on behalf of publishers and songwriters by performance rights organizations and collection societies. Key performing rights organizations and collection societies include: The American Society of Composers, Authors and Publishers (“ASCAP”), SESAC and Broadcast Music, Inc. (“BMI”) in the U.S.; Mechanical-Copyright Protection Society and The Performing Right Society (“MCPS-PRS Alliance”) in the U.K.; The German Copyright Society (“GEMA”) in Germany and the Japanese Society for Rights of Authors, Composers and Publishers (“JASRAC”) in Japan. The societies pay a percentage (which is set in each country) of the performance royalties to the copyright owner(s) or administrators (i.e., the publisher(s)), and a percentage directly to the songwriter(s), of the composition. Thus, the publisher generally retains the performance royalties it receives other than any amounts attributable to co-publishers.

The worldwide music publishing market was estimated to have generated approximately $3.6 billion in revenues in 2004 according to figures contained in the March 2, 2005 issue of *Music & Copyright*. We estimate that mechanical royalties are approximately 30% of 2002 industry revenues; performance royalties, 33%; synchronization, 13%; and other, 23%. Geographically, North America is the largest market representing approximately 40% of the global publishing market.

The top five music publishers collectively account for over 65% of the market. Based on *Music & Copyright*’s estimates, EMI Music Publishing (“EMI Publishing”) and WMG (Warner/Chappell) are the market leaders in music publishing, holding 16.3% and 16.0% shares of the market in 2004, respectively. They are followed by BMG at 13.8%, Universal at 12.5% and Sony/ATV Music Publishing LLC (“Sony/ATV”) at 7.4%. Independent music publishers represent the balance of the market, as well as many individual songwriters who publish their own works.

The music publishing market has proven to be more resilient than the recorded music market in recent years as performance, synchronization and other revenue streams are largely unaffected by piracy, and are benefiting

from additional sources of income from digital exploitation of music in downloads and mobile phone ringtones. Trends in music publishing vary by royalty source:

- **Mechanical**: Although the decline in the recorded music market has begun to have an impact on mechanical royalties, this decline has been partly offset by the regular and predictable statutory increases in the mechanical royalty rate in the U.S. (including an increase from 8 cents to 8.5 cents per song in January 2004, and a further increase from 8.5 cents to 9.1 cents per song to occur in January 2006), the increasing efficiency of local collection societies worldwide and the growth of new revenue sources such as mobile phone ringtones and legitimate Internet and wireless downloads.

- **Performance**: According to an April 2004 report from Enders Analysis, performance royalties experienced steady growth from 1999 to 2001. Continued growth is expected, largely driven by television, live performance and online radio streaming and advertising royalties.

- **Synchronization**: We believe synchronization revenues have experienced strong growth in recent years and will continue to do so, benefiting from the proliferation of media channels, a recovery in advertising, robust videogames sales and growing DVD film sales/rentals.

- **Other**: According to Enders Analysis, print revenues grew steadily from 1999 to 2001. Continued growth in this category is expected as well, as more people can afford musical instruments and lessons and online sheet music sales drive incremental revenues.

In addition, major publishers have the opportunity to generate significant value by the acquisition of small publishers by extracting cost savings (as acquired libraries can be administered with little or no incremental cost) and by increasing revenues through more aggressive marketing efforts.
